The present sequence was used in reverse transcriptase polymerase chain reaction (RT-PCR) analysis of human prostate cancer cells. The invention relates to an isolated polymucleotide comprising a prostate-specific chimeric enhancer (PSE) sequence and a proximal promoter sequence operably linked to a nucleic acid segment that encodes a heterologous polypeptide. The PSE contains an ARE and specifically activates transcription of the nucleic acid segment in a mammalian prostate cell. The construct is useful for the treatment of a prostate disorder or a metastasised prostate cancer, such as hyperplasia or hyperproliferation of prostate cells. It is also useful for directing the tissue-specific expression of a heterologous polypeptide in a human prostate cell. The construct may be administered by injection, infection, transformation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a recombinant protein having a 341 amino acid sequence fully defined in the specification, or its mutant in which at least one amino acid is deleted, substituted or added, but which retains the galectin activity. The protein is useful for studying mechanisms of fish immunity and for diagnosing fish diseases. The galectin proteins are involved in inhibition of cell adhesion, inflammation, metastasis of tumour cells, T cell movement, and apoptosis. The present sequence is a primer which was used in the production of a probe used to analyse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; androgen response element; ARE; cytostatic; gene thera prostate-specific chimeric enhancer; transcriptional regulatitargeted gene expression; prostate cancer; prostate disorder; prostate-specific antigen; PSA; beta-actin; PCR primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           នន្តន
The invention relates to Detecting a collagen gene alteration associated with a pathological condition in a human subject by obtaining from the subject a sample nucleic acid containing a portion of at least 15 consecutive nucleotides of the segment of the COLIA1 gene extending in the 5' to 3' direction from 78 nucleotides of intron 27 located adjacent exon 28 through the 3' end of intron 51, where the portion contains an contronic nucleotide and a first and second site, determining the sequence of the portion and comparing the sequence of the portion with the corresponding consensus sequence of the COLIA1 gene where a difference between the sequence of the portion and the consensus sequence indicates the presence of the collagen alteration in the subject. The method is used for deterting abnormalities in a COLI or COL9 gene is useful for determining whether a subject is afflicted with pathological conditions associated with an altered collagen gene such as osteoporosis, multiple epiphyseal dysplasia, osteogenesis imperfecta, shortness of stature and low bone density. Identification of an abnormality in a collagen gene is also useful for designing a therapeutic nucleotide or gene therapy agent which can be administered to the subject to correct or alleviate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ននិនិនិនិនិនិ
         The invention relates to an isolated Fanconi anaemia protein complex (C (FANCD2) polypeptide. The FANCD2 protein comprises a sequence of 1472 c amino acids fully defined in the specification, its 90% identical CC sequence, a sequence encoded by a polynucleotide that is at least 90% cidentical to sequence siven in specification such as a 5127 base pair CC sequence, or a fragment which is at least 50 amino acids in length. The CC FANCD2 protein is useful for treating an FA pathway defect in a cell CC target or for treating a patient with a defective FANCD2 gene. The FANCD2 CC gene is useful for making a recombinant expression vector. The FANCD2 CC grotein and its gene are useful as a novel target for therapeutic CC associated with DNA repair and cell cycle abnormalities such as Fanconi CC anaemia, Bloom's syndrome, Cockayne's syndrome, Hereditary non-polyposis CC colon cancer, ataxia telangiactasia and Xeroderma pigmentosum. The FANCD2 gene is useful in producing probes and primers for screening patients in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                          Novel isolated Fanconi anemia protein complex polypeptide, termed FANCD2, useful for treating Fanconi anemia pathway defect in cell target or for treating patient with defective FANCD2 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      abnormality. The method is useful for detecting mutations in both the coding and non-coding sequences of any of the COL1 or COL9 genes. Therefore the method can be used to detect collagen gene alterations which affect either the primary sequence of a collagen protein chain, splicing of the mRNA encoding such chains or regulation of expression the genes encoding such chains. The present sequence is a PCR primer which amplifies a nucleic acid from a collagen gene of the invention
                                                                                                                                                                                                                                                                                                        Claim 8; Page 56; 103pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         preparing an experimental mouse model for use in screening new therapeutics for treating conditions involving defective DNA repair, and in gene therapy methods. A recombinant vector containing the RANCD2 gene of the invention is useful in gene therapy. This polynucleotide sequence represents a PCR primer for amplifying a FANCD exon relating to the
 The invention relates to an isolated nucleic acid from a human gene encoding aminopeocidase P (XPNEP2), bradykinin receptor B1 (BDKKB1), tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kallikrein (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme
                                                                                                             New isolated nucleic acid with at least one polymorphic position, useful for detecting, diagnosing and treating disorders such as angioedema, cancer, viral, bacterial or fungal infection, cardiovascular and
                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-NOV-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABS60160 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     artery disease, arteriosclerosis and/or atherosclerosis, and artery disease, arteriosclerosis and/or atherosclerosis, and artery hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory hypersensitivity reactions, viral, bacterial or fungal infection, Chronic obstructive pulmonary disease (COPD) and enterocolitis (many other diseases and disorders are listed in the specification). The polynucleotides are also useful for chromosome identification. Antibodies against the proteins may be utilised for immunophenotyping of cell lines and biological samples. The present sequence is included in the sequence listing but is not referred to anywhere else in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 21

CC 1 (KLK1), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme CC 2 (ACE2) or protease inhibitor 4 (PI4), comprising at least one CC polymorphic position. Also included are (1) a probe that hybridises to a CC polymorphic position as provided in the detailed summary of single CC nucleotide polymorphisms comprising additional 5 and 3 flanking genomic sequence; (2) analysing (M1) at least one nucleic acid sample comprising obtaining the sample from one or more individuals and determining the encoding a protein selected from the group above; (3) constructing (M2) the plotypes using the genes comprising grouphic positions in a gene encoding a protein selected from the group above; (3) constructing (M2) (4) identifying (M3) an individual at risk of developing a disorder comprises one or more polymorphic positions within a gene encoding a minimistration of an ACE inhibitor and/or vasopeptidase inhibitor comprises one or more polymorphic positions within a gene encoding a individual solution and protein selected from the group above; and (6) genotyping (M4) an individual at protein selected from the group above; and (6) genotyping (M4) an individual approtein selected from the group above; and (6) genotyping (M4) an individual approtein selected from the group above; and (6) genotyping (M4) an individual approtein selected from the group above; and (7) genes which consist one position with a known data set. The genes (M1, M2, M3 and M4) and compositions are useful for detecting, diagnosing, treating, are compositions are useful for detecting, diagnosing, treating, the provided and compositions are useful for detecting, diagnosing, treating, and compositions are useful for detecting, diagnosing, treating, and mysertension, heart failure, myocardial infarction, ventricular consistivity reactions, sepsis, autoimmune diseases, inflammatory hypertensis, inflammatory reactions. sepsis, autoimmune diseases, inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a DNA sequence encoding clock protein BMAL2 (brain-muscle-Arnt-like protein 2). The gene and protein are applicable in diagnosis of and development of drugs for insomnia and other sleeping disorders e.g. non-24-hour sleep, sleep-phase forward or retreat syndrome and time-zone variation syndrome. ABS68501-ABS68552 represent BMAL2 coding sequences and PCR primers of the invention
                                                                                                     Human; oligonucleotide label-domain; CMV; cytomegalovirus; Epstein-Barr virus; lambda-immunoglobulin light chain; hap kappa-immunoglobulin light chain; repetitive Alu sequence;

The probe sets of the invention are useful for detecting kappa or CC lambda-immunoglobulin light chain mRNA or corresponding heteronuclear RNA, CMV (cytomegalovirus) immediate early RNA, EBV (Epstein-Barr virus) CC early RNA 1 and RNA 2, and human Alu repetitive satellite genomic control on the invention is a useful generic sequence for incorporation into oligonucleotide probes for detecting gene-specific sequences within CC cells or tissue samples in in situ hybridisation analysis and for cells or tissue samples in immunobistochemical analyses. The present mucleic control of the probes that were used in the invention for detecting or oligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or oligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting or colligonucleotide probes that were used in the invention for detecting the colligonucleotide probes to the colligonucleotide probes for the coll

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancer, psoriasis, diabetic retinopathy, atherosclerosis or menorrhagia. The ECSN4 proteins are also useful in the manufacture of diagnostic or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or activation, detecting a tumour or tumour neovasculature, cardiac disease, or endometriosis by detecting the amount of ECSN4 present in a sample. The polynucleotide sequences encoding ECSN4 are useful in gene therapy for treating a hypoxic condition such as cancer, cardiac disease, endometriosis or atherosclerosis and in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to endothelial cell-specific molecule 4 (BCSM4), and the polynucleotide sequences encoding it. The ECSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, neovasculature) such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel endothelial cell-specific molecule polypeptide 1 or 4, useful imaging, diagnosing and treating a condition involving vascular endothelium e.g. cancer, cardiac disease, endometriosis, diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    manufacture of medicaments for treating the above disease. The sequenare useful for modulating angiogenesis in an individual. The present sequence represents a RT-PCR primer for RNA encoding human connective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 21 BP; 9 A; 4 C; 4 G; 4 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26-FEB-2002

                     terminal portion of a coding sequence of an RNA virus and at least an N-terminal portion of a coding sequence of RNA virus, a second polynucleotide region including a 3' untranslated region (UTR) sequence of the RNA virus and at least a C-terminal portion of a coding sequence of the virus and a third polynucleotide region encoding a reporter molecule, flanked by first and second polynucleotide regions; and a promoter sequence being operatively linked to expression cassette in a promoter sequence being operatively linked to expression cassette in a manner so as to enable a transcription of a minus strand RNA molecule from the expression cassette. Nucleic acid construct of the invention is useful for detecting the presence of an RNA virus in a cell. It is also useful for screening anti-viral drugs and determining drug resistance of an RNA virus. The present sequence is a PCR primer used to amplify the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to primers useful for diagnosis of one or more kinds of cancer and a diagnostic kit comprising the primers of the invention. The primers are derived from highly homologous areas of twelve melanoma antigen gene (MAGE) subtypes or eight GAGE subtypes. The primers of the invention are useful for diagnosing cancer by performing polymerase chain reaction (PGR), reverse transcription (RT)-PCR, and nested PCR. The kit of the invention is used to detect six MAGE subtypes and eight GAGE subtypes. The present DNA sequence is an antisense PCR primer which is used as a diagnostic marker for MAGE subtypes 1-6
                                                                                                                                                                                                                                                                                                                                                             The invention relates to nucleic acid expression cassette including a first 5' non-coding region (NCR) sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel nucleic acid construct useful for detecting the presence of RNA virus, comprises an expression cassette and a promoter operably linked expression cassette for minus strand RNA transcription of the cassette.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tan YH,

                                                                                                                The present invention relates to the use of a nucleic acid that causes the synthesis of the AKINI1 protein, to induce or increase the resistance to pathogen attack in plants. The nucleic acid and its encoded protein can be used to impart resistance to bacteria, viruses, fungi and nematodes, especially necrotropic pathogens such as Xanthomonas campestris, in large-scale crops, vegetables and flowers. Probes and primers that hybridise with the AKINI1 gene can be used to detect resistance against pathogens, and antisense sequences can be used to modulate resistance. The present sequence is a PCR primer used to isolate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 21

```

```
Detecting target analyte comprises providing a first classifier of a first population of sensors, distributing a second population of sensors and determining the response of the second population of sensors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human interleukin 6 target sequence #2.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; interleukin 6; microsphere; genosensor; target; ss; microarray; optical signature.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                                                                                          The invention relates to detecting a target analyte (TA) comprising: (a) comproviding first classifier (I) for the response of a first population of sensors (II) to a first population of distributing a second population of sensors (II) to a first TA; (b) condition (c) determining response of (IV) to the sample, where response condition (c) determining response of (IV) to the sample, where response condition (c) determining response of the sample, where response conditions a condition of microspheres comprising an array comprising: (a) providing a contacting the microspheres with a sample of the target analyte; (b) contacting the microspheres with a sample of the target analyte; (c) contacting a classifier for the response of the microspheres on a substrate with carget analyte; and (e) distributing the microspheres on a substrate with a surface comprising discrete sites. The new method detects a target analyte in a sample by contacting the sample with a sensor array. The contactive agents may be synthesised on the beads which are then randomly distributed on a patterned surface. The beads are self-encoded with dyes allowing a correlation of the location of an individual site on the carray. The self-encoding feature eliminates the need for a more complex, the array are self-encoded by exposing the array to a reference analyte the array are self-encoded by exposing the array to a reference analyte.
                                 while illuminating the array with excitation light energy. The light sensor array may carry thousands of discrete sensing elements whose combined signal provides for substantial improvements in sensor dete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Detecting target analyte comprises providing a first classifier of a first population of sensors, distributing a second population of sensors and determining the response of the second population of sensors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 38; 104pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2002-463219/49
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  06-OCT-2000; 2000US-0238866P

The invention relates to detecting a target analyte (TA) comprising: (a) CC providing first classifier (I) for the response of a first population of CC sensors (II) from a first pool of sensors (III) to a first TA; (b) CC distributing a second population of sensors (IV) from (III) on an array; CC resembles (I) for a first TA, indicating the presence of the first TA in CC resembles (I) for a first TA, indicating the presence of the first TA in CC contacting the microspheres comprising an array comprising; (a) providing a CC population of microspheres with a sample of the target analyte; (b) CC recording the response of the microspheres to the target analyte; (d) CC generating a classifier for the response of the microspheres on a substrate with a rarget analyte; and (e) distributing the microspheres on a substrate with a sample by contacting the sample with a sensor array. The method allows the synthesis of the biocactive agents i.e., nucleic acids and rethod allows the synthesis of the biocactive agents i.e., nucleic acids array in the microspheres to the synthesis of the biocactive agents i.e., nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 3311

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       allowing a correlation of the location of an individual site on the array. The self-encoding feature eliminates the need for a more complex, multi-step encoding system. The identities of the individual sensors in the array are self-encoded by exposing the array to a reference analyte while illuminating the array with excitation light energy. The light sensor array may carry thousands of discrete sensing elements whose combined signal provides for substantial improvements in sensor detection limits, response times and signal-to-noise ratios. The present sequence is a probe which is attached to a microsphere genosensor and used to illustrate the method of the invention
                                                                                                                                                          WPI; 2002-698522/75

CC aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator (FLAP), epoxide hydrocarbon receptor nuclear translocator (FLAP), epoxide hydrocarbon receptor nuclear translocator (FLAP), epoxide hydrocarbon receptor nuclear translocator (FLAP), glutathione-S-transferase 2 (ESPHX2), 5-lipoxygenase activating CC protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl CC transferase (NNMT), NADH quinone oxidoreductase 2 (NOC2), CC (UGT2B4), UDP-glucuronosyl transferase 2 (NOC2), CC (UGT2B4), UDP-glucuronosyl transferase 2 (NOC2), CC (MRR3), urokinase receptor (URAP), multidrug resistance 2 (NOC2), CC (MRR3), lactotransferrin (LTP), multidrug resistance associated protein 3 (CC (MRR3), orphan nuclear receptor (NR112), or acetylcholine muscarinic CC receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence CC The polymorphisms in the human genes cited in the invention are useful as CC genetic linkage markers for locating and characterising the genes that CC are responsible for specific traits within the genome and eventually CC identifying the genes responsible for a variety of disorder-related CC traits as a result of their e.g., overexpression, constitutive traits and resulting the comprising the comprising the golymorphic sequences contained in CYP4501A; CYPP4501A; CYP74502E1, CC ARM7, EPHX2, GST12, NMT, NOO2, NR112, STM, UGT2B4, UGT2B15, AHR, CM AHR, MDR1 and/or MDR3 are useful for screening individuals for altered drug cmetabolism. The polymorphic sequences contained in CYP4501A; CYPP4501A1, CYPP4501A2, CYPP45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                altered drug metabolism; cardiovascular function; colorectal tumour; central nervous system; pulmonary; immunological; SNP; single nucleotide polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to the sequence of an isolated nucleic acid molecule comprising at least one base variation from that of a known human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A1), adrenergic receptor betal (ADBR1), cytochrome P450 02E1 (CYP45002E1), adrenergic receptor betal (ADBR1),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated nucleic acid molecules having polymorphisms in known human genes e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers for locating, identifying and characterizing the genes responsible for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Guida
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorder-related traits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-NOV-2000; 2000US-00724389

aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator (ARNT), cathepsin S (CTSS), cyclooxgenase 2 (CDX2), diazepam binding cinhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating protein (FLAP), glutathione-S-transferase 12 (GST12), histanine-N-methyl transferase (HNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl transferase (NNMT), NADPH quinone oxidoreductase 2 (NQC2), sulfotransferase thermolabile (STM), UDP-glucuronosyl transferase 284 (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl transferase (UGT2B15), urokinase receptor (URA), multidrug resistance 1 (VMR1), lactotransferrin (LTFP), multidrug resistance associated protein 3 (VMRP3), orphan nuclear receptor (NRAI), or acetylcholine muscarinic creceptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence. The polymorphisms in the human genes cited in the invention are useful as genetic linkage markers for locating and characterising the genes that are responsible for specific traits within the genome and eventually cleantifying the genes responsible for a variety of disorder-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 KW Human; 88; primer; cytochrome P450 Al; CYP4501Al; UGT2B4; MDR1; PCR; W Cytochrome P450 A2; CYP4501A2; cytochrome P450 02E; CYP45002El; LTF; KW cytochrome P450 A2; CYP45002El; LTF; KW adrenergic receptor betal; ADBR1; aryl hydrocarbon; ARR; MRP3; NR112; KW cytlooxgenase 2; COX2; diazepam binding inhibitor; DBI; haematological; KW cyclooxgenase 2; EPHX2; 5-lipoxygenase activating protein; FLAP; W epoxide hydroxylase 2; EPHX2; 5-lipoxygenase activating protein; FLAP; KW HAMT; kallikrein 2; KLK2; nicotinamide-N-methyl transferase; NNMT; KW HAMT; kallikrein 2; KLK2; nicotinamide-N-methyl transferase; NNMT; KW HAMT; kallikrein 2; KLK2; nicotinamide-N-methyl transferase; NTM; W DP-glucuronosyl transferase 2B4; UDP-glucuronosyl transferase 2B7; W UDP-glucuronosyl transferase; UGT2B15; urokinase receptor; uPA; W UGT2B7; UDP-glucuronosyl transferase; UGT2B15; urokinase receptor; uPA; W UGT2B7; UDP-glucuronosyl transferase; UGT2B15; urokinase receptor; uPA; W ultidrug resistance associated protein 3; cancer; proteate; wullocation muscarinic receptor; CHMR1; CHMR2; CHMR3; CHMR4; CHMR5; KW altered drug metabolism; cardiovascular function; colorectal tumour; KW central nervous system; nulmonary; immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to the sequence of an isolated nucleic acid molecule comprising at least one base variation from that of a known human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2), cytochrome P450 02E1 (CYP4501ZE1), adrenergic receptor beta1 (ADBR1), cytochrome P450 02E1 (CYP4500ZE1), adrenergic receptor beta1 (ADBR1),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecules having polymorphisms in known human genes e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers for locating, identifying and characterizing the genes responsible for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1692/c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  expression, mutation or underexpression, which may be used in diagnosing CC and/or treating the disorders. The nucleic acid molecules comprising the polymorphic sequences contained in CYP4501A1, CYP44502E1, CYP44502E1, STM, UGT2B4, UGT2B4, UGT2B15, AHR, URR1 and/or MDR3 are useful for screening individuals for altered drug metabolism. The polymorphic sequences contained in CYP4501A1, CYPP4501A2, CHR, WDR1 and/or MDR3 may also be used to screen individuals for susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are used to screen for altered central tumours, in DB1 or CHMR1 for altered central cused to screen function, in CNZ for altered cuseptibility to colorectal tumours, in DB1 or CHMR1 for altered central nervous system function, in FLAP and HNMT for altered pulmonary, communological or haematological function, in KLKZ for altered serine cused control, in CHMR3, CHMR5 for altered central and peripheral nervous system function. The present sequence represents a PCR primer used to amplify the sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human acetyl choline muscarinic receptor 1 polymorphic sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23-DEC-2002

CC thuman cytochrome P450 Al (CYP4501Al), adrenergic receptor betal (ADBRI), cc aryl hydrocarbon (AHR), aryl hydrocarbon receptor muclear translocator (CRANT), cathepsin $ (CTSS), cyclooxgenase 2 (COX2), diazepam binding crotein (FTAP), glutathione-5-transferase 12 (CGYI2), histemaine-N-methyl ctransferase (HNMT), kkalikrein 2) kkk2, nicotinamide -N-methyl ctransferase (HNMT), kkalikrein 2) kkk2, nicotinamide -N-methyl croteransferase (HNMT), which pullidry resistance associated protein 3 (CC (MPRI), lateotransferrin (LTP), multidryg resistance associated protein 3 (CC (MPRI), lateotransferrin (LTP), multidryg resistance associated protein 3 (CC (MPRI), lateotransferrin (LTP), multidryg resistance associated protein 3 (CC (MPRI)) orphan nuclear receptor (NRII), or acetylcholine muscarinic creeptor (1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR2, CHMR4 or CHMR5) sequence. CC receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR2, CHMR4 or CHMR5) sequence. CT is polymorphisms in the human genes cited in the invention are useful as genetic linkage markers for locating and characterising the genes that CC are responsible for specific traits within the genome and eventually ctraits as a result of their e.g., overexpression, constitutive expression, mutation or underexpression, which may be used in diagnosing cand/or treating the disorders. The nucleic acid may discompating the genes compating the genes compating the genes compating the genes compating the genes constitutive colorest polymorphic sequences contained in CYP4501A2, CYP4502E1, CC MRT, while may be used to screen individuals for altered drug compating the genes compating 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers for locating, identifying and characterizing the genes responsible for
Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to the sequence of an isolated nucleic acid molecule comprising at least one base variation from that of a known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Example 26; Page 157; 714pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorder-related

CC aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator (C aryl hydrocarbon (SHR), aryl hydrocarbon receptor nuclear translocator (C ARWT), cathepsin \$ (CTSS), cyclooxgenase 2 (CDX2), diazepam binding conhibitor (DBI), epoxide hydroxylase 2 (EDHX2), 5-lipoxygenase activating cyrotein (FLAP), glutathione-5-transferase 2 (CDX2), histamine-N-methyl curansferase (NNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl transferase (NNMT), MADPH quinone oxidoreductase 2 (NQO2), cransferase (NMT), NADPH quinone oxidoreductase 2 (NQO2), cransferase 2B4 (CC guifotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4 (CC guifotransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4 (CC guifotransferase (UGT2B15), urokinase receptor (NPA), multidrug resistance associated protein 3 (CMR12), lactotransferrin (LTF), multidrug resistance associated protein 3 (CMR21), lactotransferrin (LTF), multidrug resistance associated protein 3 (CMR21), lactotransferrin (LTF), multidrug resistance associated protein 3 (CMR21), or acetylcholine muscarinic craceptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence. CC monthly are protein for locating enes cited in the invention are useful as a result of the human genes cited in the invention are useful as creenifying the genes responsible for a variety of disorder-related cracity of disorder-related cracity of an acetylcholine muscaring the capture of treating the disorder of traits within the genome and eventually cc and/or treating the disorder of their e.g., overexpression, constitutive useful as a result of their e.g., overexpression, constitutive useful as comprising the genes comprising the genes comprising the genes comprising the genes of their e.g., overexpression, which may be used in diagnosing the genes comprising the genes of their e.g., overexpression, constitutive constitutive and/or mins are useful for screening individuals for altered drug comprising the genes comprising the genes comprising the genes comprising the genes compri This invention relates to the sequence of an isolated nucleic acid molecule comprising at least one base variation from that of a known human cytochrome P450 A1 (CYP4501A1), cytochrome P450 A2 (CYP4501A2), cytochrome P450 02E1 (CYP45002E1), adrenargic receptor beta1 (ADBR1), polymorphic haematological function, in CHMR3, CHMR4 or CHMR5 for altered central nervous system function. DNA sequence of the invention The present sequence represents a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC genetic linkage markers for locating and characterishing the genes that CC are responsible for specific traits within the genome and eventually CC identifying the genes responsible for a variety of disorder-related CC traits as a result of their e.g., overexpression, constitutive CC expression, mutation or underexpression, which may be used in diagnosing CC and/or treating the disorders. The nucleic acid molecules comprising the CC polymorphic sequences contained in CYP4501A1, CYPP4501A2, CYP4502B1, CC ARNT, EPHX2, GST12, NNMT, NOO2, NR112, STM, UGT2B4, UGT2B7, UGT2B15, AHR, CC MDR1 and/or MDR3 are useful for screening individuals for altered drug CC susceptibility to cancer. Polymorphic sequences contained in CYP4501A1, CYPP4501A2, CRP4501A2, CC AHR, MDR1 and/or MDR3 may also be used to screen individuals for cused to screen for altered cardiovascular function, in COX2 for altered susceptibility to colorectal tumours, in DBI or CHMR1 for altered central concrose system function, in FIAP and HNMT for altered serine CC immunological or haematological function, in KIKZ for altered serine CC procease activity in the prostate, in ITF for altered immunological or DRA sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

CC signaling system which is associated with a cardiovascular disease (I), CC the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) CC or (II) is useful for producing cells capable of expressing a molecular CC variant polypeptide which is associated with a cardiovascular disease. CC (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing and complecular variant gene comprising (I) is useful for identifying and cobtaining a pro-drug or drug capable of modulating the activity of a cC molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system (CC or its gene product, or for identifying and obtaining an inhibitor of the cC signaling system or its gene product. The isolated proteins and CC polynucleotides encoding them are useful for preparation of a phypercholesterolacial composition for treating a cardiovascular disease such as CC coronary heart disease, hypertension, atherosclerosis, or related to hypercholesterolacmia. The gene or a polynucleotide fragment of the EDN/ECE/EDNR signaling system are useful as forensic markers, for creating a transgenic animal and in creation of a solid support comprising polynucleotides, genes, vectors, polypeptides, antibodies or dentify single nucleotide polymorphisms in DNA encoding primer used to identify single nucleotide polymorphisms in DNA encoding pathway XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a polynucleotide (I) of the endothelin (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (signaling system which is associated with a cardiovascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         enzyme/receptors of endothelin and endothelin converting enzyme signaling system associated with cardiovascular disease, useful for treating the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 55; 190pp;

CC (EDN) endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR) CC signaling system which is associated with a cardiovascular disease. (I) CC the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) CC or (II) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (C (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing a complex variant gene comprising (I) is useful for identifying and complex variant of a polypeptide of modulating the activity of a cell expressing a considerable reproduct, or for identifying and obtaining a pro-drug or drug capable of modulating the activity of a cell-expressing a considerable reproduct, or for identifying and obtaining an inhibitor of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and comparison of the encoding them are useful for preparation of a polypeptide of the EDN/EDNR/ECE coronary heart disease, hypertension, atherosclerosis, or related to abnormal angiogenesis or fatty acid metabolism e.g. diabetes and familial C hypercholesterolaemia. The gene or a polymucleotide fragment of the EDN/ECE/EDNR signaling system are useful as forensic markers, for creating a transgenic animal and in creation of a solid support comprising polymucleotides, genes, vectors, polypeptides, antibodies or dentify single nucleotide polymorphisms in DNA encoding cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway

The invention describes a polynucleotide (I) of the endothelin CC (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR) CC signaling system which is associated with a cardiovascular disease. (I), CC the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) cor (II) is useful for producing cells capable of expressing a molecular CC variant polypeptide which is associated with a cardiovascular disease. (C (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing and CC molecular variant gene comprising (I) is useful for identifying and CC molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system CC or its gene product, or for identifying and obtaining an inhibitor of the CC activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system CC signaling system or its gene product. The isolated proteins and CC polynucleotides encoding them are useful for preparation of a CC coronary heart disease, hypertension, atherosclerosis, or related to CC abnormal angiogenesis or fatty acid metabolism e.g. diabetes and familial hypercholesterolaemia. The gene or a polynucleotide fragment of the EDN/ECE/EDNR signaling system are useful as forensic markers, for CC comprising polynucleotides, genes, vectors, polypeptides, antibodies or bost cells of the invention. This sequence represents a PCR primer used to identify single nucleotide polymorphisms in DNA encoding the polymorphisms in DNA encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel polynucleotide of the endothelin/endothelin converting enzyme/receptors of endothelin and endothelin converting enzyme signaling system associated with cardiovascular disease, useful for treating the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a polynucleotide (I) of the endothelin CC (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR) CC signaling system which is associated with a cardiovascular disease. (I), CC or (II) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (I) (III) the EDN, ECE or EDNR (II) or a vector (III) expressing a molecular variant gene comprising (I) is useful for identifying and cobtaining a pro-drug or drug capable of modulating the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product, or for identifying and bottaining an inhibitor of the cartivity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and cc polynucleotides encoding them are useful for preparation of a polynucleotides encoding them are useful for preparation of a comparary heart disease, hypertension, atherosclerosis, or related to abnormal angiogenesis or fatty acid metabolism e.g. diabetes and familial Cc polynucleotides or fatty acid metabolism e.g. diabetes and familial comperting a transgenic animal and in creation of a solid support creating a transgenic animal and in creation of a solid support comprising polynucleotides, genes, vectors, polypeptides, antibodies or dentify single nucleotide polymorphisms in DNA encoding pathway cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 3323
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The invention relates to a new multispecific antibody, comprising at CC least two polypeptides (PP1 and PP2) which meet at a multiface, where PP1 chas a multimerisation domain forming an interface positioned to interact with an interface of a multimerisation domain of PP2, and both CC with an interface of a multimerisation domain of PP2, and both cCC avariable light chain, where the light chain has a sequence common to CC artibodies. Hetromultimers of the inventions include bispecific CC antibodies, bispecific immunoadhesins and antibody-immunoadhesin cC chimeras. The activity of antibodies of the invention may be described CC as, cytostatic, antibacterial and antivital. The heteromultimer can be cused for redirected cytotoxicity, for example to kill tumour cells, as a converting enzyme activated prodrugs at a target site such as a tumour, CC converting enzyme activated prodrugs at a target such as a tumour, CC for treating infectious diseases, for targeting immune complexes to cell current sequence represents the mutagenic primer D399S for introducing a cutation into the CH3 domain of a humanised anti-CD3 heavy chain or CD4-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New multispecific antibodies having heteromultimeric and common components are useful to direct treatment to a target site such as a tumor cell, cell surface receptor or clot, as a vaccine adjuvant and treat infectious disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 3325
ABZ95973/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC The present invention relates to a method of determining the susceptibility or resistance of an animal to porcine reproductive and crespiratory syndrome virus (PRRSV). This involves assaying for CD 151 in CC addition, coding sequences of CD 151 ere described, and anti-viral CC compounds designated anti-RNA entry proteins (anti-REPs). The method is CC useful for determining susceptibility and resistance to PRRSV in an CC animal. This is particularly useful for improving swine breeding or for CC screening different pig breeding lines. The method is also useful for CC caping non-simian recombinant cell lines for propagating the virus, CC against pRRSV, and for diagnosing pRRSV infection in a swine. The present CC sequence is a PCR primer used to isolate the porcine CD 151 coding sequence. Note: The sequence data for this patent did not form part of CC the printed specification, but was obtained in electronic format directly CC from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The invention relates to a novel pharmaceutical composition, which has a Cfirst active agent comprising an oligonucleotide antisense to the CC initiation codon, coding region, 5' or 3' end genomic flanking regions, CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of CC junctions of genes encoding a polypeptide associated with lung and/or CC nasal airway dysfunction and a second active agent comprising an CC antiinflammatory, antiallergic, antiasthmatic, hypotensive, acc use in antisense gene therapy. The composition is useful for treating or CC immunosuppressive, and cytostatic activity. The composition may have a CC use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, also CC for enhancing the prophylactic or therapeutic respiratory effect of an CC antiinflammatory steroid in a subject, for reducing or depleting levels of of or reducing sensitivity to adenosine, reducing levels of adenosine CC using inflammation, lung allergies, or a respiratory disease or condition, CC lung inflammation, but was obtained in electronic format directly from WIPO CC at fig. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       corresponding ubiquinone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; SEQ ID NO 11215; 872pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               respiration, has oligo(s) antisense to specific gene(s) or it
curresponding RNAs, and glucocorticoid or non-glucocorticoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          English

The remedies are for prostatic diseases e.g. benign prostatic carriers are remedies are for prostatic diseases e.g. benign prostatic hyperplasia and prostate cancer. The present sequence is a PCR primer for human Edg-4 used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                 31-JAN-1997;

                         The invention relates to a composition comprising an antisense oligonucleotide directed against vascular endothelial growth factor (VEGF). The antisense oligonucleotide is useful for preparing a composition treating cancer, neoplastic proliferation, abnormal cellular proliferation and preventing angiogenesis. The present sequence is a VEGF CDNA target region for the antisisense oligonucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       angiogenesis;

         The present invention describes DNA (I) encoding a corticotropin CC releasing hormone receptor type 1 (CRH-R1) protein comprising an amino CC (II) capable of expressing (I) or its degenerate variant, and regulatory elements necessary for CC (II) capable of expressing (I) or its degenerate variant, and regulatory elements necessary for CC expression of the DNA in a cell; (2) a host cell (III) transfected with CC (II); (3) an isolated CRH-R1 protein (IV) encoded by (I); (4) an antibody CC (v) directed against (IV); (5) a pharmaceutical composition (VI) cC comprising (IV), and a carrier; and (6) protecting (M) skin cells against CC damage induced by an environmental factor, by inducing the expression of CC CRH-R type Ig in the skin cells, where the expression of the receptor protects the skin cells against the damage. CRH-R1 has antipsoriatic, CC antiallergic, immunosuppressive, antiinflammatory and dermatological cativities. (VI) can be used for treating a pathophysiological state such CC as hyperproliferative epidermal disorder, neuroendocrine disorder, altergic contact dermatitis, autoimmune disorder, epidermal constant dermatitis, autoimmune disorder, epidermal constant cardingenesis, malignant transformation of epidermal or dermal constant on chromosome 17, and mouse CRH-R1 is located to chromosome CC is used in an example from the present a PCR primer for mouse CRH-R1, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                   The invention comprises a method for inferring a genetic pigmentation trait of a human. The method involves identifying a single nucleotide polymorphism (SNP) in a pigmentation gene - where the pigmentation gene is not melanocortin-1 receptor (MCIR) and agout signaling protein (ASIP). The method of the invention is useful for inferring a genetic pigmentation trait of a human, especially for inferring the race of a human subject. The method is useful for inferring a genetic pigmentation trait such as hair shade or colour, or eye shade or colour of a human subject. The method may be used as a forensic tool for obtaining information relating to physical characteristics of a potential crime victim or a perpetrator of a crime from a nucleic acid sample present at a crime scene. The present PCR primer is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-SEP-2001;

                                                                                                                                                                                                                                                            The invention relates to an isolated glycoprotein hormone Zlutl sequence, the mature protein or antigenic peptides derived from Zlutl. Also included are an isolated polynucleotide encoding Zlutl, an isolated antibody that specifically binds to Zlutl, treating hyperthyroidism in female mammals by administering Zlutl and a pharmaceutical composition comprising Zlutl. Zlutl is useful for manufacturing a medicament for treating hyperthyroidism. Anti-Zlutl antibodies can be used to detect Zlutl in tissue sections from a biopsy specimen or to screen biological samples in vitro for the presence of Zlutl. Zlutl is useful for treating women with hyperthyroidism. The nuclei cacid molecules are useful for detecting the expression of a Zlutl gene in a biological sample. The present sequence is a PCR primer used to detect expression of Zlutl in pituitary cells, amplifying part of the 3' untranslated region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        村

Also described: (1) an array of (PN) s comprising two or more of the isolated (PN)s; (2) detecting a (PN) in an individual; (3) a computer-readable storage medium, where each record has a field identifying a base occupying a (PN) site and a location of the polymorphic site; and (4) a signal carrying data for access by an application program having executed on a data processing system. The (PN) can be used for detecting loci associated with multiple sclerosis. ACF64025 to ACF64024 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; detection; computer-readable storage medium; polymorphic site; signal carrying data; data processing system; multiple sclerosis; PCR primer; ss.

Also described: (1) an array of (PN)s comprising two or more of the isolated (PN)s; (2) detecting a (PN) in an individual; (3) a computer-readable storage medium, where each record has a field identifying a base occupying a (PN) site and a location of the polymorphic site; and (4) a concupying a (PN) site and a location of the polymorphic site; and (4) a
                                                                                                                                                                                                                                                                                        signal carrying data for access by an application program having executed on a data processing system. The (PN) can be used for detecting loci associated with multiple sclerosis. ACF64025 to ACF64424 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide, useful sclerosis.

The novel method comprises providing an array comprising an array substrate, at least first and second sites, and a population of microspheres, where first and second reaction components are attached with a non-cleavable linker to the first and second microspheres that are randomly distributed on the sites. The methods are useful for detecting the presence of a particular target analyte, or for detecting an enzymatic reaction, such as the presence or absence of, or mutations on a particular nucleotide sequence or protein, e.g. an enzyme, antibody or antigen. They are also useful in forensic DNA fingerprinting, detecting environmental pollutants such as pesticides or herbicides, and in bacterial, fungal, protozoal, Mycoplasmal, Rickettsial diagnostic tests, as well as in pregnancy tests. This polymucleotide represents a target sequence of the microsphere genosensors of the invention
                                                                                                                                                                                                                                                                                                                                             Human; PCR; primer; transgenic mouse; lymphocyte maturation; IL-3; IL-7; cytokine; interleukin-3; interleukin-6; IL-6; interleukin-7; M-CSF; SCF; macrophage-colony stimulating factor; stem cell factor; oncostatin M; OM granulocyte-colony stimulating factor; GM-CSF; LIF; leukaemia inhibitory factor; ss.
New recipient mammal, preferably a mouse, useful as a model of human disease to assess efficacy of therapeutic or prophylactic treatments, for facilitating production of donor-specific functional immunity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           macrophage-colony stimulating factor (M-CSF), granulocyte-colony, stimulating factor (GM-CSF), stem cell factor (SCF), leukaemia inhibitory factor (IIF) and oncostatin M (OM). The gene disruption is in a gene that modulated VDJ recombination e.g. a RAG gene. The gene is disrupted by insertion of a transgene comprising major histocompatibility complex (MHC) Class II DR3 and DQ2 genes. The transgenic mouse is useful as a model of human disease to assess efficacy of therapeutic or prophylactic treatments, or to assess the antigenic potential of compounds. The transgenic mouse is also useful for supporting donor haematopoietic stem cells or facilitating production of donor-specific functional immunity. PCR primers ACC42571-ACC42639 were used to generate the transgenic mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example; Page 36; 70pp; English.
The present invention relates to a new transgenic mouse, which comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hepatotropic; immunosuppressive; cardiant; hypertensive; tranquilizer; vulnerary; virucide; antibacterial; protozoacide; fungicide; nootropic; antiparasitic; neuroprotective; cerebroprotective; antiparakinsonian; anticonvulsant; antiaddictive; analgesic; dermatological; keratolytic; antiseborrheic; antirheumatic; antiarthritic; antiinflammatory; anti-HIV; cytostatic; antiasthmatic; antipsoriatic; hypotensive; osteopathic; cytostatic; antiathmatic; antiinfertiality; hypotensive; osteopathic; neuroleptic; antidepressant; antiinfertiality; NOVX; human disease; novX-associated disorder; trauma; viral; bacterial; fungal; protozoal; parasitic infection; Alzheimer's disease; stroke; forensic biology;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200281517-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABT33411;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

Example 1; Page 215; 672pp; English.

CC variant differ from the mature form, provided that the variant differs in come more than 15 % of the amino acids from the sequence of the mature cc form. The NOVX polypeptides, nucleic acids encoding the polypeptides, and cc NOVX-associated disorder in humans and for treating a syndrome associated cc with a human disease (NOVX-associated disorder). NOVX polypeptides and cc NOVX-associated disorder in humans and for treating a syndrome associated cc with a human disease (NOVX-associated disorder). NOVX polypeptides and cc predisposition to a disease associated with altered level of polypeptide ce expression or the amount of nucleic acid from a mammal and comparing it collypeptide and polymucleotide, by measuring the level of polypeptide ce expression or the amount of nucleic acid from a mammal and comparing it collypeptide is also useful for identifying an agent that binds to NOVX cc and a cell expression or activity of NOVX. The antibodies and a cell expression or activity of NOVX. The antibodies and a cell expression with presence or amammal for disease. NOVX cc polypeptides are useful for treating a pathological state in a mammal. The antibodies are also constituted in the presence or amount of NOVX in a sample. NOVX cc polypeptides are useful for treating or preventing disorders or syndromes considered to the collypeptide and also treat disorders such as e.g., Alzheimer's cl including trauma, viral, bacterial, fungal, protozoal, and parasitic cc and movx gene and to modulate NOVX encoding nucleic acids are useful for dentifying an agent the NOVX proteins, to detect NOVX mRNA, or a genetic lesion in cc antibodies which are useful for the sequences from very small biological samples such as tissues e.g. that or skin or body fluids in forensic biology and as primers and probes cfor use in identifying and/or cloning NoVX mucleic acids are useful for useful for producing non-human transgenic animals which are useful for cuseful for evaluating modulators of NOVX protein activity. This polymcleotide sequence The invention relates to a novel isolated polypeptide, designated (NOV1 - 33), consisting of a mature form of one of 61 sequences, the specification, or its variant, where amino acid residue(s) in represents a XVON PCR gene therapy. T R primer of the invention designated ä given ä

The invention describes an isolated POLYX (POLY1-17) polypeptide and its variant. POLYX polypeptides (especially POLY5, POLY5 and POLY7), the polypurcleotides encoding them (I) and an anti-POLYX-antibody (III) are useful for treating or preventing a pathology associated with POLYX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC polypeptide in humans and for treating a syndrome associated with human CC disease. POLYX polypeptide is also useful for identifying an agent that CC binds to POLYX and a cell expressing POLYX is useful for identifying a CC therapeutic agent for use in treatment of a pathology related to aberrant CC expression or physiological interactions of the polypeptide. (III) is CC useful for treating a pathological state in a mammal and for determining CC the presence or amount of POLYX in a sample. POLY14 (GABA receptor-like CC conditions, depression, stroke, Parkinson's disease, Huntington's CC disease, Tourette's syndrome, amyotrophic lateral sclerosis, head trauma, CC expression cripht ventricular dysplasia. POLY5-8 (Epidermal growth CC arrhythmogenic ripht ventricular dysplasia. POLY5-8 (Epidermal growth CC factor like proteins) may be useful for treatment of leukaemia, CC inpus and anaemia. POLY13 (sulfotransferase-like protein) may be useful for treatment of leukaemia, CC lipus and anaemia. POLY13 (sulfotransferase-like protein) may be useful for treatment of fambert-Eaton myasthenic syndrome, asthma, myxoid CC useful in treatment of fambert-Eaton myasthenic syndrome, asthma, myxoid CC useful in treatment of fambert-Eaton myasthenic syndrome, asthma, myxoid condulators of POLYX protein and for identifying and/or evaluating cand-or activity of POLYX protein and for identifying and/or evaluating cand-or useful to isolate DNA encoding nowel human transgenic animals which are useful for studying the function of condulators of POLYX protein activity. This sequence represents a PCR condulators of the NA encoding novel human transgenic animals which are useful for studying the function of the protein activity. This sequence represents a PCR condulators of the protein activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 3337
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

The present invention describes a double-stranded short interfering nucleic acid (siNA) that downregulates expression of a target gene, where the siNA molecule comprises no ribonucleotides and each strand of the codube-stranded siNA comprises about 21 nucleotides. Also described: (1) a siNA molecule that inhibits replication of a virus and optionally does not require presence of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits expression of a target gene and does not require presence of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits expression of a target gene and does not require presence of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits expression of a target gene by mediating RNA interference; and (5) a method for modulating expression of a gene in a cell using siNA complexity of an expression of a gene in a cell using siNA complexity of an expression of a target gene, inhibiting conversion of target RNA, and contininflammatory, plant antiviral, vasotropic, neuroprotective, cytostatic, cardiovascular, immunosuppressive, respiratory, mephrotropic expression of target genes, inhibiting expression of target RNA, and compression of target penes, inhibiting expression of target RNA, and content of any disorder that responds to modulation of gene expression, cespecially animal and plant viral infections, specifically hepatitis B or cytostally animal and plant virals infections, specifically hepatitis B or cytostally animal and plant virals infections, specifically hepatitis B or cytostally animal and plant virals, slNA molecules can be used: (a) for cytostally animal and plant virals infections, specifically hepatitis B or cytostally animal and plant virals. Infections, pocifically hepatitis B or cytostally animal and plant virals, slNA molecules such as createnesses such as createnesses and cytostally characters, binding affinity and/or mediates intoreases; and (b) for diagnosis, target can be used: (a) for diagnosis, target can be used: (a) for diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 05-SEP-2002;

The methods are useful for detecting the presence or absence of target nucleic acid sequences on sample nucleic acid strands that are characteristic of pathogens or gene variations and mutations relating to human leukocyte antigen (HLA) or T-cell receptor gene sequences, e.g. for HLA tissue typing, detecting genetically inherited diseases or detecting infectious organisms in tissues. The diagnostic probes are useful for detecting the presence of particular target nucleotide sequences. The present invention provides improved methods of detecting sample/target nucleic acid sequences, where the use of diagnostic probes having increased specificity reduces the number of alleles detected, which increases the resolution of the method, and does so at a lower cost. The present sequence represents a probe of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detecting the presence of a target nucleic acid sequence on a sample nucleic acid strand, useful for human leukocyte antigen tissue typing, comprises contacting a sample with a diagnostic probe under hybridizing

                                                                                                                                                          CC The present invention relates to the detecting of a target nucleic acid sequence on a sample nucleic acid strand. The methods are useful for CC detecting the presence or absence of target nucleic acid sequences on CC sample nucleic acid strands that are characteristic of pathogens or gene CC variations and mutations relating to human leukocyte antigen (HLA) or T-CC cell receptor gene sequences, e.g. for HLA tissue typing, detecting CC genetically inherited diseases or detecting infectious organisms in CC tissues. The diagnostic probes are useful for detecting the presence of particular target nucleotide sequences. The present invention provides comproved methods of detecting sample/target nucleic acid sequences, where CC the use of diagnostic probes having increased specificity reduces the number of alleles detected, which increases the resolution of the method, CC and does so at a lower cost. The present sequence represents a probe of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 3341
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc inhibition of expression of a target gene, where (I) comprises double ctranded RNA of 15-40 nucleotides in length and a 3' or 5' overhang chaving a length of 0-nucleotide to 5-nucleotides on each strand, where the sequence of the double stranded RNA is substantially identical to a gortion of a mRNA or transcript of the target gene. Also described: (I) cc interfering with or inhibiting the expression of a target gene in a cell cc yexposing the cell to an amount of (I); (2) a gene silencing array cc comprising a substantially flat substrate, and addressably arrayed cc different double-stranded RNA; (3) an array-based method of assessing a cc phenotypic effect of a double-stranded RNA on a target gene; (4) cc validating a gene as a potential drug target for a disease or condition; (5) selecting an optimised sequence of a double-stranded RNA for condition and (6) a short double-stranded RNA effective for interfering with or condition expression of a target gene in a cell; and (6) a short double-stranded RNA effective for interfering with or condition expression of a target gene comprising any of 311 20-78 cc conclectide sequences (see ADC16586). (I) has cytostatic confidence of a target gene therapy. The RNAs are useful as reverse genetic and/or therapeutic tools for interfering or inhibiting expression of a target gene. They are useful for treating proliferative diseases, confidence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The
                                                                                                method is useful for determining if a patient has cancer, or is at increased risk of developing cancer, e.g. breast, ovarian or prostate cancer. A microarray of the invention is useful for determining if a patient has cancer, or is at increased risk of developing cancer, by hybridising a nucleic acid sample to the nucleic acid sequences from the array, and detecting the presence of mutations in FA/BRCA pathway genes in the nucleic acid sample from the patient, where detecting the presence of mutations is indicative of a patient who has cancer, or is at increased risk of developing cancer. A method of the invention is useful for screening a chemosensitising agent, and the agent obtained is useful for screening a chemosensitising agent, and the agent obtained is useful
                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel method of diagnosing or determining if a patient has cancer or is at increased risk of cancer, involving testing a Fanconi Anaemia (FA)/BRCA pathway gene or protein for the presence of a cancer-associated defect, where the presence of one or more cancer-associated defects is indicative of cancer or an increased risk of cancer in the patient. The method of the invention has cytostatic activity. The

diseases. Examination of dermatitis for responsiveness to simproved treatment steroids in patients with atopic t of patients suffering from alle suffering from allergic

Example 2 Page 14; 24pp; Japanese.

The present invention describes a method for examining the response of patients with atopic dermatitis to steroids. The method comprises: (a) determining the expression levels of an RNaseA gene or an RNase k6 precursor gene in a living sample; and (b) comparing the response level with that of healthy subjects and steroid responsive patients, determined by PCR of CDNA. The present sequence represents an RNaseA PCR primer, which is used in an example from the present invention.

                                                                                                                                                          remaining nucleotides 5-17 are 2'-deoxy; and (b) the cytosines at positions 1, 4 and 19 are 5-methylated. Oligonucleotide shown in sequence ACP36398 (1) is used: (a) to delay progression of androgen-sensitive prostatic cancer cells to the androgen-independent state, in vivo or in vitro; (b) to treat prostatic cancer (after initially withdrawing androgens to induce apoptosis); and (c) to increase sensitivity of cancer cells (prostatic, renal, non-small cell lung, urothelial transitional, ovarian and some breast cancer cells) that express abnormal levels of TRPM-2 to chemotherapy or radiation. The modifications present in (1) increase stability in vivo and activity (both in vivo or in vitro) and result in a synergistic increase in effect when (1) is used with chemotherapeutic agents or other antisense oligonucleotides directed against other antispoptotic genes. The present sequence represents an anti-apoptotic protein TRPM-2 (testosterone-repressed prostate message-2)
                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a compound consisting of an oligonucleotide with a phosphorothicate backbone throughout, in which: (a) sugars on nucleotide residues 1-4 and 18-21 are 2'-O-methoxyethyl modified, and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New modified antisense oligonucleotide, useful particularly for treating prostatic cancer, inhibits the testosterone-repressed prostate message-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gleave M, Rennie PS,

                          The present invention describes a predictor set comprising a plurality of colynucleotides or polypeptides whose expression pattern is predictive of the response of cells to treatment with a compound that modulates protein tyrosine kinase activity of cells, comprising whether a compound is capable of condulating the activity of cells, comprising whether a compound is capable of cells, comprising whether the cells express a plurality of markers, and correlating the expression of the markers to the compound's ability to correlate with compound sensitivity or resistance of cell lines for correlate with compound sensitivity or resistance of cells associated with a disease state, and (3) identifying polymucleotides and colypeptides whose expression pattern of a microarray of polymucleotides or polypeptides that predict compounds, analysing the expression pattern of a microarray of polymucleotides or polypeptides, and selecting polymucleotides or polypeptides that predict the sensitivity or resistance of cells associated with a disease state, comprising subjecting the plurality of colymucleotides or polypeptides that predict the sensitivity or resistance of cells associated with a disease state by using the expression pattern of a microarray. The polymucleotides and complete the polymucleotides or polypeptides and selecting the polymucleotides or polypeptides, and selecting the compounds that interact with protein tyrosine kinases and/or protein tyrosine kinase pathways. These may be used in determining drug sensitivity in patient response at a molecular level. The present of cancer) based on patient response at a molecular level. The present of cancer is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         predictor set; protein tyrosine kinase activity modulator;

                                                                                                                                                                                                                                                              The invention comprises oligonucleotides for detecting and identifying subtypes of human papilloma virus (HPV) contained in a sample. The oligonucleotides of the invention are useful for simultaneously detecting and identifying subtypes of HPVs. The present DNA sequence represents an oligonucleotide that was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                               Detector for identifying human papilloma virus subtypes, comprises carrier having two parts carrying first and second oligonucleotides that respectively hybridize with DNA contained in first and second subtypes of
single nucleotide polymorphism; SNP; fish; Salmo salar;

                                                                                                                                                                                                                                                                                                                                                                 The invention relates to decreasing pigmentation in the skin, hair, wool or fur of a vertebrate or a mammal. This method comprises administering a composition comprising bone morphogenetic protein 4 (BMP-4), an active fusion protein of BMP-4, an active fragment of BMP-4, a BMP-4 mimic or a combination of any of those. The method is useful for lightening or decreasing pigmentation in the skin, hair, wool or fur of a vertebrate or a mammal. The current sequence represents a PCR primer for the

The invention relates to a novel isolated G-coupled protein receptor cc related polypeptides. The novel polypeptide comprise any of the 22 fully defined sequences of 87-1780 amino acids, given in the specification; their mature forms; and possible variants. The novel polypeptides have the following activities: antidiabetic, anorectic, antibacterial, controlled, fungicide, cytostatic, nootropic, neuroprotective, including a preventing in a human, a pathology associated with the G-coupled protein receptor related polypeptides are useful in a method of treating or converting in a human, a pathology associated with the G-coupled protein receptor related polypeptides. The polypeptides are useful in the complete receptor related polypeptides. The polypeptides are useful in the complete protein and follows a method of treating or complete related polypeptides. The polypeptides are useful in the complete protein and follows a method of treating, preventing or disposaing diseases, such as metabolic disorders, diabetes, obesity, infectious diseases, cancer-associated diseases, neurodegenerative disorders, and various dyslipidaemias; metabolic disturbances associated with obesity, metabolic X syndrome and wasting disorders associated with obesity, metabolic X syndrome and wasting disorders associated with chronic diseases and various cancers. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, hematopoiesis, wound healing and angiogenesis, in gene content of the province of the province in the respective of disposes; to Novx substances for use in the respective of disposes; in chromospecifically to Novx substances for use in the respective of disposes; in chromospecifically to Novx substances for use in the respective of disposes; in chromospecifically to Novx substances for use in the respective of disposes; in chromospecifically to Novx substances for use in the respective of dispose

                                                                                                                                      The primer is used with primer CMLII (AAQ14244) to amplify chimeric mRNA contg. a specific exon-exon junction associated with chronic myeloid leukaemia (CML). It is complementary to CDNA sequences within the break point cluster region (BCR) exon 2. It can distinguish between ALL BCR-ABL chimeric mRNA and CML BCR-ABL mRNA. The CML DNA sequences used to design the primer are reported by Heisterkamp, N., et al. Nature 315:758 (1985); Grosvelt, G., at al Mol. Cell Biol. 6:607 (1987); and Shtivelman, E., et al Cell 47:277 (1986). See also AAQ14241-47

AAQ90299 and AAQ90300 are a pair of upstream and AAQ90301 and AAQ90302 are a pair of downstream primers for the PCR amplification of AAQ73001 and AAQ73002, which encode AAA62657 and AAA62658 human tissue plastin plastin) and human leukocyte plastin (1-plastin) respectively. The plastin cDNA and amino acid sequences were used to develop isoform specific plastin nucleotide probes, and isoform specific anti-plastin
                                                                                                                                                                                                                                                                                                  nucleotide

                                       The Ikaros gene encodes a zinc finger protein which can be used in a CC therapeutic composition to treat animals with an immune system disorder. CC It may also be used for assessing whether a subject is at risk for an CC immune disorder. It is of particular use in treating a disorder of the CC corpus striatum. Heterologous genes may be expressed by placing them CC under the control of an Ikaros protein. Potential high affinity binding sites CC for the Ikaros proteins were found in the enhancer and promoter regions CC for the TR-alpha, 'beta and 'delta, the CD3-delta, -epsilon and -gamma CC genes, the SL3 and HIV long terminal repeat and in the regulatory domains CC motif were also found in the purine boxes of the Ikaros found in the purine boxes of the Ikaros for the TR the TDT promoter as well as in the NFKB variant sites of the CC LYF site of the TDT promoter as well as in the NFKB variant sites of the CC 2003 to add missing OS field.)
